

SMS - Pioneering Sand Management

Engineering Design

Our specialist engineering team provide a suite of project services to deliver the best fit for purpose sand and corrosion monitoring instrumentation for your process system. Whether topside, subsea, acoustic or intrusive, SMS will be a vital partner for your asset integration.

Services

Instrumentation & System Design

Design and selection of topside & subsea sand & corrosion monitoring instrumentation

Testing & Installation

Factory Acceptance Tests & commissioning services

System Integration Testing

Integration testing and diagnostic services. DCS historian integration for enhanced data handling & data management.

Management

SMS is a dynamic and progressive company of recognised expert advisors in sand management and sand / solids monitoring. We reduce the risks associated with sanding and produced solids saving both money and time whilst meeting all health and safety compliance requirements. SMS help optimise oil and gas production rates whilst making sure that solids production is within tolerable limits. The SMS service offering is unique, as we are independent experts this allows SMS to design and supply systems to match our clients' individual requirements. SMS are the only company to offer a complete package from sand management strategy, engineering design, commissioning & hook up through to well test and well service sand / solids monitoring.

Training & Competency

Rigorous external and internal training, verified competency programme in accordance with our ISO certified Integrated Management System.

Systems

SMS provides a range of tailored sand and solids management solutions through our Integrated Project Engineering (IPE) group. Through our extensive experience, we have gained insight and developed industry best practices for sand management activities. Our approach is simple but highly effective good working practices combined with technical expertise results in satisfied clients. Key to this success is our focused approach and understanding of fundamental engineering tasks and responsibilities.

Our clients are IOC's & NOC's, Integrated Service Companies, Facilities Management and Process Engineering Consultancies. Our systems are focused on sand and corrosion management - from retrospective reporting on monitoring data to fully integrated engineering 'sand focal point' placement within the client's office.

SMS' combination of unparalleled sand services project experience combined with our class leading acoustic and intrusive sand monitoring systems offers the best long term sand management package on the market today.
