

SMS - Pioneering Sand Management

Well Testing

We assist clients to achieve their well test objectives - Identification of produced fluids, determination of reservoir deliverability, prediction of reservoir size. SMS supplies technical experts and equipment to acquire real time sand and solids management data during dynamic well test conditions.

Services

Field Specialists

Manufacture trained dedicated field specialists to execute safety critical operations.

Instrumentation Packages

Class leading instrumentation packages for the most extreme well service application. Options included Real time acoustic sand monitoring, high resolution intrusive sand monitoring and SMS's proprietary Intrusive / Acoustic Real Time (I-ART™) sand / solids monitoring rental packages.

Remote Real Time Services

Dedicate project engineers to provide remote, real time remote monitoring for 24hrs operational cover.

Management

SMS are a dynamic and progressive company of recognised expert advisors in sand management and sand /solids monitoring. We reduce the risks associated with sanding saving both money and time whilst meeting all health and safety compliance requirements. SMS help optimise oil and gas production rates whilst making sure that solids production is within tolerable limits. The SMS service offering is unique in that we are independent from manufacturing companies which allow us to design and procure systems to match our clients' individual requirements. SMS are the only company to offer a complete package from strategy and design through to commissioning and monitoring.

Training & Competency

Manufacturer trained and certified Field Specialist team. Rigorous internal and external training and verified competency programme in accordance with our ISO certified Integrated Management System

Technical Support

Full technical support and back up from our HQ in Aberdeen. All equipment spreads come with 100% system redundancy and is supplied with an ATEX certification package and manufacturer warranty.

Systems

SMS Ltd uniquely supplies field service personnel and instrumentation for acoustic and intrusive sand monitoring requirements for well testing. SMS Ltd provide a range of sand monitoring packages that provide unrivalled flexibility and technical benefits, whether it be real time acoustic, high resolution intrusive or combined acoustic / intrusive rental packages, SMS provide solutions for your sand & solids monitoring requirements. SMS pioneered the *I-ART™* intrusive and acoustic real time monitoring. The *I-ART™* system is unique in that both acoustic and intrusive technologies are used together for a best in class quality of service. SMS recommend using a dual acoustic sensor and single intrusive configuration using our pioneering *I-ART™* integrated system where solids monitoring are of paramount importance.

SMS Ltd's combination of unparalleled sand services field experience combined with our class leading acoustic and intrusive sand monitoring systems offers the best Well Service system package on the market today.
